10th December 2009

Mr. Robert Duvergé
72 Jacarandas Avenue
Quatre Bornes

Dear Sir,

Further to your request, we are pleased to send you our quote for a Dynamico Walker.

The Dynamico Walker aids the development of balance and aids in the training and development of unassisted walking. It enables the person to walk without help when independent walking is not yet possible.

Features include:

- A non-toxic epoxy varnished chrome plated frame
- All the castors have brakes and bumpers for added protection
- A height adjustable, padded axillary support for greater comfort and stability
- A height and depth adjustable, padded pelvic support for greater comfort and stability
- Includes an adjustable, removable and washable padded harness that provides extra support

Specifications:

Weight	19.7 kg
Maximum User weight	90 kg
External depth	1060 mm
External width	770 mm
Height to pelvic pad	980-1200 mm
Height to axillary pad	1080-1430 mm
Depth to axillary pad	310 mm
Width to axillary pad	400 mm

Moreover, your son, Jean François, would need the following additional items:

- Arm supports: to increase upper body support for improved upright, postural control and optimal gait training participation.
- Leg divider: to keep the legs separated while walking. It is great for improving joint alignment of the lower body and preventing scissoring of the legs.
- Tray: to provide another sturdy surface to support the upper body when walking. It is also great for use during handwriting, fine motor activities, or simply carrying items when walking.
- Abduction block: will act as a wall to help separate the feet while walking. It is helpful for maintaining joint alignment for straight line walking.
